

Intel[®] Entry Storage System SS4000-E

Tested Hardware and Operating System List

Revision 2.1

February 2008

Storage Server Group Marketing

Revision History

Date	Revision Number	Modifications
21 Feb 2006	0.5	First Review Copy
27 Feb 2006	1.0	Incorporated comments from review. 1.0 prepared for posting to FDBL.
30 May 2006	1.1	Increased the disk drive list with new drives tested.
2 June 2006	1.2	Incorporated list of supported hardware for PXE support in Client Backup and Recovery application. Created list of supported disk drives for the BCFv11b214 release of the software (version 1.1). Updated balance of document as it relates to release 1.1.
23 June 2006	1.3	Corrected heading on section 9 & removed reference to PXE in the section.
10 October 2006	1.4	Removed WD5000YS HDD until issue related to drives offline is resolved. Removed reference to Jumbo Frames on Netgear & D-Link switches. Apparent incompatibility between switch and SS4000-E firmware.
13 October 2006	1.5	Updated document with information specific to release 1.2 of the firmware. Replaced Recovery CD table with updated and more expanded table.
17 October 2006	1.5	Updated Microsoft SCSI initiator version in Client Components Table and added IBM server to Vendor Tested platforms table.
19 December 2006	1.6	Updated HDD table with new drives & reflecting testing of all drives under the latest firmware release. Added switches supporting jumbo frames and an uninterruptible power system.
25 January 2007	1.7	Added Western Digital WDxxxxYS family of drives noting updated Western Digital firmware to fix "drive offline" issue is required for these HDDs.
16 March 2007	1.8	Updated HDD table with new drives added & additions to HDD firmware versions on tested drives. Corrected TA numbers for the correct firmware revisions. Added information relative to firmware revision 1.4. Removed Maxtor 7H500F0 HDD due to possible incompatibility with revision 1.4 firmware. Intel has ordered some new 7H500F0 HDDs to determine if these HDDs possibly demonstrated failures due to a quality problem or mishandling in shipment. If the new HDDs pass this HDD will be added to the THOL.
12 June 2007	1.9	Added WD2500YS & WD1600YS disk drives to the HDD list.
11 October 2007	2.0	Added Seagate and Hitachi disk drives to HDD list
4 February 2008	2.1	Added Hitachi disk drives to HDD list

1. Introduction

This document is intended to provide users of the Intel® Entry Storage System SS4000-E with a guide to the different client operating systems, disk drives and peripherals tested by Intel on this platform.

This document will continue to be updated as new disk drives, peripherals, and client operating systems are tested or until the Intel® Entry Storage System SS4000-E is no longer in production. Each new release of the document will present updated information as well as continue to provide the information from previous releases.

Intel will only provide support for those disk drives and peripherals under the specified system configuration (System Firmware revisions) and client operating system versions with which they were tested.

1.1 Test Overview

Testing performed on the Intel® Entry Storage System SS4000-E is classified as Peripheral Compatibility and Stress Testing.

The latest version of an operating system signifies the latest supported version at the time of the actual test run. Each new release of this document may have a newly supported release of a given operating system. Previous releases of a supported operating system may not be tested beyond the basic installation test process.

1.1.1 Peripheral Compatibility and Stress Testing

Peripheral Compatibility and Stress testing is performed only on the most current release of a supported operating system (client or SS4000-E) at the time of a given validation run. The Peripheral Compatibility and Stress testing process consists of three areas: Base Platform, Peripheral Compatibility, and Stress.

Base Platform: Each base platform will successfully install the client software on the particular operating system, successfully run a disk stress test, and successfully run a network stress test.

Peripheral Compatibility: Peripheral compatibility validation (PV) testing uses test suites to gain an accurate view of how the storage system performs with a wide variety of peripherals under the primary supported operating systems. These tests are designed to show hardware compatibility between the peripherals and the storage system platform and include functional testing only. No heavy stressing of the systems or the peripherals is performed for PV testing.

Stress Testing: This test sequence uses configurations that include peripherals for a minimum 24-hour test run without injecting errors (this includes weekend runs of 72-hours). Each configuration passes an installation test and a Network/Disk Stress test. Any fatal errors that occur will require a complete test restart.

1.1.1.1 Support Commitment for Peripheral Compatibility and Stress Testing

Intel commits to provide the following level of customer support for client operating systems that receive Peripheral Compatibility and Stress testing:

- Intel will provide support for customer issues with these client operating systems involving installation and/or functionality of the storage system with or without the peripherals listed in this document as having been tested under the particular client operating system.
- Support is defined as assistance in root causing issues, and determining a customer acceptable resolution to the issue associated with the client operating system. The resolution may include, but is not limited to, peripheral driver changes, engaging the vendor for resolution, BIOS changes, firmware changes, or determining a customer acceptable workaround for the issue.
- Intel will provide and test operating system drivers for the onboard network and storage controller.
- Intel will go through some of the steps to achieve certification to ensure its customers do not run across any problems, but the actual certification is the responsibility of the individual customer.

For client operating systems and peripherals not listed in this document, there is no support commitment. Intel will consider support requests on a case-by-case basis.

1.2 Pass/Fail Test Criteria

For each operating system and peripheral configuration, a test passes if specific criteria are met. Specific configurations may have had particular characteristics that were addressed on a case-by-case basis. In general, a configuration passes testing if the following conditions are met:

- The client software installed without error.
- Hardware peripheral compatibility tests ran to completion without error.
- Test software suites executed successfully.

Test and data files were created in the correct directories without error.

Files copied from client to storage system and back compare to the original with zero errors reported.

Clients remain connected to the storage system.

Industry standard test suites run to completion with zero errors reported.

All Intel® Entry Storage System SS4000-E testing was performed using the standard cube form factor chassis.

The following table lists the base system configuration tested. Each base system configuration is assigned an identifier number that is referenced in the tables throughout this document. New base system configurations are added with each new release of this document.

Component	Release 1.0	Release 1.1	Release 1.2	Release 1.3	Release 1.4
System TA Number	D39155-007	D39155-008		D39155-010	D39155-011
Baseboard PBA Number	D40818-202	D40818-203	D40818-203	D40818-203	D40818-203
Baseboard Redboot Firmware Revision	T04	T04	T04	T04	T04
Storage System Software	fs-bc-1.0-20060207	BCFv11b214	BCFv12b522	BCFv13b524	BCFv14b709
Storage System Console Software	v1.0-b129	SSCv10b116	SSCv10b116	SSCv10b116	SSCv10b121
Client Backup Recovery Software	v3.5-b131p	CBRv35b523	CBRv35b532	CBRv35b532	CBRv35b535
Client Recovery CD	v3.5-b131p	RCDv30b365	RCDv30b368	RCDv30b368	RCDv30b368

Additional Client Components
Microsoft iSCSI Initiator version 2.00 (Release 1.0)
Microsoft iSCSI Initiator version 2.01 (Release 1.1)
Microsoft iSCSI Initiator version 2.02 (Release 1.2)
.NET Framework 1.1

2. Supported Client Operating Systems

The following table provides a list of supported client operating systems compatible with the Intel® Entry Storage System SS4000-E. Each of the listed client operating systems was tested for compatibility with Intel® Entry Storage System SS4000-E base system configuration listed in Section 1 of this document. Client operating systems are supported only with the specified base system configuration(s) with which they were tested. This list does not apply to the Client Backup Recovery application software and Storage Console application software. This list applies to using a web browser to access the storage system management interface.

Operating System	Base System Configuration Tested & Type of Testing	Notes
Microsoft Windows 2003 Server with Service Pack 1 (subset of Enterprise)	Configuration 1 – Compatibility & Stress	
Microsoft* Windows* XP Professional, Service Pack 2	Configuration 1 – Compatibility & Stress	
Microsoft* Windows* XP Home (subset of XP Pro)	Configuration 1 – Compatibility & Stress	Vendor tested
Red Hat* Enterprise Linux* 4.0, update 4	Configuration 1 – Compatibility & Stress	
Active Directory		
Microsoft Windows 2003 Enterprise Server Release 2	Domain Controller	
Microsoft 2003 Small Business Edition SP1	Domain Controller	

3. Client Systems and Peripherals

The following table provides a list of tested client systems compatible with the Intel® Entry Storage System SS4000-E. The systems presented in this table are particular configurations used in testing the application during the validation process. The first portion of the table presents platforms the Intel validation lab tested. The second portion of the table presents platforms that were vendor tested. It is not meant to represent that these are the only systems that will run the application.

NOTE: PXE boot capability is supported for Intel boards and HBAs only.

Intel Tested				
Manufacturer	Model	Processor	Operating System	Notes

4. Peripherals

Peripheral compatibility and stress testing will only be performed with the shipping version of the Storage System operating system, as indicated in Section 1 of this document.

Manufacturer	Capacity	Model Number	Interface	Comments
4.1 USB External Hard Disk Drives				
Maxtor	300GB	E01G300	USB	
Seagate	300GB	ST3000801CB-RK	USB	
Western Digital	250GB	WDXUL2500BB	USB	Firmware 0412

5. Memory

This section documents memory components that have been tested in the Intel Entry Storage System SS4000-E system. The Technical Product Specification indicates the supported memory type is PC200 per the Intel 80219 datasheet and specification. The nomenclature used to represent memory may differ. For example, PC200 is equivalent to PC1600, the PC200 is a previous naming convention for DDR memory and has been renamed to PC1600. **Note: The system memory should only be serviced by qualified service personnel.**

Manufacturer	DRAM Component	Capacity	Notes
DSL	Hynix HY50DU56822BT-J	256 MB	Non-RoHS ¹ compliant
Apacer	Samsung K4H560838F-UCCC	256 MB	RoHS compliant
Apacer	58C2256804SCT5B	256 MB	Non-RoHS compliant
Apacer	V58C2256804SC15	256 MB	RoHS compliant
UG	ELPIDA DDR2508ATA	256 MB	Non-RoHS compliant

1. RoHS stands for Restriction of Hazardous Substances and is derived from Directive 2002/95/EC of the European Parliament.

6. Hard Disk Drives

The hard drives listed in the following table have been tested with the Intel® Entry Storage System SS4000-E by Intel in its validation labs and/or by individual drive vendors. The following operating system identifiers are used in the table to specify which operating system each drive was tested under. The table below contains both SATA I (1.5Gb/s) and SATA II (3.0 Gb/s) drives. The Intel® Entry Storage System SS4000-E supports the SATA II disk drives in SATA I mode.

Identifier number	Operating System
1	Intel® Storage Management Software and embedded OS, release BCFv11b214
2	Intel® Storage Management Software and embedded OS, release BCFv12b522
3	Intel® Storage Management Software and embedded OS, release BCFv13b524
4	Intel® Storage Management Software and embedded OS, release BCFv14b709

Note that not all hard drives were tested under all operating systems. The following notation is used in the tested hard drives table below to indicate the support level that Intel provides for a particular hard drive with a particular operating system:

Number (i.e. 1)	This hard drive has been tested and is supported under the Intel Storage Management Software.
SD (Similar Drive)	The hard disk drive is supported, but not tested. This hard drive model/capacity has not been tested with the SS4000-E, but Intel will support it based on successful testing of a larger capacity hard drive from the same hard drive family. Intel has high confidence that this hard drive will function correctly with the storage system. It is assumed this drive uses the same firmware revision and drivers as a larger capacity hard drive that has been successfully tested with this storage system. If the firmware revision is different than the one tested Intel cannot guarantee it is compatible. The only difference between this drive and the one that was used in testing is the hard drive storage capacity. Intel provides the same level of support for all hard drives listed in this document, regardless of whether the drive was tested or not, but drives not running the same firmware revision as that tested cannot be supported. Given the fact that a larger capacity hard drive from the same drive family has successfully completed testing on the SS4000-E, this particular hard drive capacity point will not be tested. Customers should always test hard drives as part of the final system configuration prior to deployment.
IHVT (IHV Tested)	The hard disk drive was tested according to Intel-approved guidelines and test procedures by the Independent Hardware Vendor (IHV) that manufactured the drive. Intel provides the same level of support for all hard drives listed in this document, regardless of whether the drive was tested in an Intel lab or not, but drives not running the same firmware revision as that tested cannot be supported. IHV test reports remain the property of the IHV (Intel cannot provide copies of these reports).

7. Network Switches & Wireless Routers

The network switches and wireless routers listed in the following table have been tested with the Intel® Entry Storage System SS4000-E by Intel in its validation labs.

Manufacturer	Model Name	Type	Notes
3COM	3CGSU08	Gigabit Ethernet	
3COM	3CGSU08	Gigabit Ethernet	Jumbo Frames Enabled
SMC Networks	SMC8508T	Gigabit Ethernet	
SMC Networks	SMC8508T	Gigabit Ethernet	Jumbo Frames Enabled
Linksys	EG008W	Gigabit Ethernet	
D-Link	DGS-1008D	Gigabit Ethernet	Default Frame Size Only
Netgear	GS608	Gigabit Ethernet	Default Frame Size Only
Linksys	WRT54GS	Wireless Router	4.50.6 Firmware
D-Link	DI-624	Wireless Router	2.42 Firmware
Netgear	WPN824	Wireless Router	1.0.13 Firmware

8. Ethernet Network Cards

The Ethernet Network Interface cards presented here were vendor tested in the client systems listed in section 3. They are listed here again separately for reference. If a particular Ethernet Network Interface card is demonstrating some issues it is advised to try one of the cards listed in the table below.

Ethernet Network Interface Cards
3com 905c 100Mb
3com 10/100 Mb Ethernet
Broadcom 5751 GigE
Broadcom NetXtreme GbE Adapter
D-Link 530TC 100Mb
D-Link 530TX 100Mb
Intel Pro/100 VE
Intel Pro 1000 CT
Realtek 8169 / 811X Family GbE
Realtek 8169 / 8110 GbE
SysKonnnect 9821 GbE

9. Uninterruptible Power Supply (UPS)

Earlier releases of the firmware did not have a supported Uninterruptible Power Supply (UPS) on the tested and validated list of products. For this release a UPS system was added to the tested and validated list of products.

Uninterruptible Power Supply
APC BR800BLK Back-UPS RS 800VA 120V

10. Recovery CD Supported Hardware Components

The following components are supported for the Recovery CD capabilities of the Client Backup and Recovery application. Support for these components is built into the kernel on the CD and a subset has been tested. It is strongly advised that you run the diagnostic mode first to determine if your system is supported completely by the existing kernel or if one or more components are missing. If one or more components are missing you can forward the information to support for further assistance.
